Important Notes:

Without exception, all current safety regulations must be observed in those countries where our products are used.

The photos shown in this brochure feature construction sites in progress. For this reason especially safety and anchor details cannot always be considered as conclusive or final. These are subject to the risk assessment carried out by the contractor.

The systems or items shown are not necessarily available in all countries.

Safety instructions and load specifications are to be strictly observed at all times. Separate structural calculations are required for any deviations from the standard design data.

The information contained herein is subject to technical changes in the interests of progress. Errors and typographical mistakes reserved.

PROKIT EP 110

- 2 The safety system
for temporary edge protection

Quick installation

- 4 Very few different system components
and self-securing posts

Flexibly mounted

- 5 Numerous possibilities
for a wide range of mounting situations

Technically sound

- 6 Reliable safety barriers
on building shells and formwork

Economically-efficient solution

- 7 Multiple re-use,
efficiently executed
- 8 Components

PROKIT EP 110

The safety system for temporary edge protection

PERI PROKIT EP 110 is the 1.10 m high, quickly-assembled fall protection for open slab edges. Complete with side mesh barrier, guardrail post and assembly feet, a more flexible application can be realized - also for complicated structural geometries. By means of clamps, the system can also be mounted to parapets or sheet pilings. Furthermore, other accessories also allow the use of the side mesh barriers on almost all PERI formwork and scaffolding systems.

■ Quick installation

Few different, lightweight system components and self-securing guardrail posts for easy assembly

■ Flexibly mounted

Range of accessories for fixing to walls and slabs, with or without drilling

■ Technically sound

Reliable fall protection for open edges on building shells as well as formwork

■ Cost-effective

High rate of utilization and efficient logistics thanks to a minimum number of re-usable components

PROKIT EP 110 provides reliable protection for open slab edges. This accelerates working operations on building shells. (The graphic shows a system visualization)

Regular fall protection can also be realized on many PERI formwork systems with PROKIT side mesh barriers. When using TRG Scaffold Brackets, for example, they can be used on MAXIMO and TRIO wall formwork.

Quick installation

Very few different lightweight system components and self-securing posts

Installing the PROKIT EP 110 anti-fall protection is uncomplicated, very quick and safe: the posts are automatically secured when inserted into the feet after which the mesh barrier is simply fixed in position.

The standard side mesh barrier is 2.60 m long and weighs less than 20 kg which ensures easy and fatigue-free handling. The large post spacing of up to 2.40 m reduces material requirements as well as assembly time. A shorter barrier with a length of 1.30 m, is used as compensation so that only small overlaps are necessary.

PROKIT Post PP

The PROKIT posts are 1.12 m high. Thanks to a simple, mechanical solution, they are immediately secured without requiring any other measures when inserted into the feet.

The side mesh barrier can be quickly suspended over the two brackets. Subsequently, the barrier is fixed to the integrated toe board by means of the bottom moveable bracket.

The close-meshed side mesh barriers are available in 260 cm and 130 cm lengths. The yellow or red powder coating offers excellent corrosion protection; in addition, it has a strong signal effect for hazardous areas.

Side Mesh Barrier PMB 130
powder-coated, red

Side Mesh Barrier PMB 260
powder-coated, yellow

Flexibly mounted

Numerous possibilities

for a wide range of mounting situations

For the self-securing post, there is a range of mounting options. Depending on the requirement, there are accessories available, for example, for mounting on the slab, on the front side or on the parapets.

Slab feet and side feet can be mounted on reinforced concrete by means of PERI anchor bolts. If screw-in sleeves have been inserted into the fresh concrete, the slab foot can be mounted using standard M 16-8.8 bolts. This is a particular advantage, e.g. for concrete core activation.

PROKIT Post PP

The standard supports for the PROKIT post is the slab foot and side foot. In addition, there are various mounting supports that are simply clamped on the concrete component as well as on a sheet piling.

Slab Foot PDF
For mounting on the slab

Side Foot PSF
For mounting to slab, wall or flight of stairs.

Uni-Clamp PUC
For mounting on front side of slab or parapet with a clamping range of up 45 cm

Sheet Piling Clamp
For mounting on sheet piling

Technically sound

Reliable securing of edges on building shells and formwork

PROKIT EP 110 fulfils Class A of DIN EN 13374 which requires a guardrail positioned at least 1.00 m above the working surface, an intermediate guardrail and a toe board with a minimum height of 150 mm. The system thus provides protection against falling with an inclination angle of up to 10%. Compared to the use of rope equipment, one particular advantage is considerably more freedom of movement for the construction team.

In addition, the side mesh barrier is also compatible with many PERI formwork and scaffolding systems, and correspond to EN 12811.

PROKIT EP 110 provides protection on all open edges of the working platforms of this tunnel formwork

With wall formwork, the use of the side mesh barrier is also possible as an opposing guardrail.

The side mesh barrier as anti-fall protection on a slab table which has been mounted with the appropriate guardrail posts.

Economically-efficient solution

Multiple re-use, efficiently executed

On request, the mesh barrier can be powder-coated in other standard RAL colours. Thus, the anti-fall protection can also be used as an effective advertising medium.

PROKIT system components are extremely versatile, re-usable many times and allow the highest rates of utilization. In addition, the small number of system components simplifies the entire on-site material requirements and logistics.

Furthermore, the powder coating of the side mesh barrier and the galvanizing of all the other system components provide excellent protection against corrosion thus ensuring a long service life. All of this makes PROKIT EP 110 a very worthwhile investment.

Thanks to the pallet used for storage and transport, stacking of the side mesh barriers is a very simple procedure. This minimizes storage space and transport volumes and also prevents from damage.

A total of 25 mesh barriers can be quickly and compactly accommodated in the Pallet EP 110 - in exactly the position in which they are installed on the slab edge. The pallet dimensions have been optimized for transportation by truck, have the base area of a Euro pallet and also are stackable.

Stairwell areas can be secured with handrail boards which are easy to attach to the posts.

The holding brackets on the posts have nail and screw holes already in place so that handrail boards can be quickly fixed.

With the help of the post extension and a second mesh barrier, the side protection can be increased to a height of 1.75 m.

Item no.	Weight kg
